Extending the Power of EDI to the Internet –
Quickly, Reliably and Cost-Effectively

ACCPAC Exchange

Integrated, Affordable Business-to-Business EDI Transaction Services

ACCPAC Exchange™ is a comprehensive electronic data interchange (EDI) solution that complies with traditional EDI technologies and offers cost-effective EDI connectivity via the Internet. ACCPAC Exchange supports global EDI and Internet standards, empowering you to conduct business with trading partners, regardless of the EDI system or Value Added Network (VAN) they're using.

ACCPAC Exchange offers back-office integration for automated transaction processing, and a wide range of deployment options designed to meet your business requirements and those of your trading partners. It easily integrates with ACCPAC Advantage Series™ and ACCPAC Pro Series™ accounting systems out of the box, as well as providing stand-alone capabilities. Whether you're using EDI today or are new to EDI transaction processing, ACCPAC Exchange is designed to help your company:

- Reduce business transaction costs
- Comply with customer and vendor EDI mandates
- Eliminate duplicate data entry
- Provide timely order processing and reconciliation
- Reduce error rates associated with manual data entry
- Speed collection times
- Improve shipping and receiving accuracy
- Improve customer satisfaction with faster response times
- And much more!

ACCPAC Exchange easily integrates back-office accounting, Internet trading and the global EDI network.

Did you know? More than two-thirds of the readers polled in *Electronic Commerce World* (May 2002) expect to transition their EDI traffic to the Internet in the next 2 years.

Big-business Benefits Without the Price Tag!

ACCPAC Exchange offers enhanced benefits to companies that have already standardized on EDI, and it opens up new opportunities to businesses that have found traditional VAN-based EDI cost-prohibitive. With minimal infrastructure requirements and convenient monthly service plans, ACCPAC Exchange enables small and medium size companies to send and receive EDI orders, invoices, shipping acknowledgements and other documents – without the expense typically associated with traditional VANs, such as set-up fees, lease lines, interconnect fees and so on.

With support for thousands of trading partner documents and a user-friendly interface, you'll quickly find yourself looking for opportunities to conduct more of your business through ACCPAC Exchange. In fact, ACCPAC Exchange is an ideal platform for improving business efficiencies across your entire supply chain by creating your own cost-effective EDI trading community.

ACCPAC – Your Foundation for End-to-End Business Management Applications

ACCPAC® advanced accounting systems are the heart of our end-to-end business management applications – and your business success. With an ACCPAC accounting system as the engine that powers your business, you get integrated solutions, flexible deployment options, advanced customization features and investment protection.

ACCPAC offers end-to-end business management applications in the following areas:

- Accounting and Operations
- E-Customer Relationship Management
- Manufacturing
- E-Commerce
- Warehouse Management
- Human Resource Management
- Hosted Application Services

How ACCPAC Exchange Works

ACCPAC Exchange is an affordable EDI solution that utilizes the Internet, open standards and EDI software to enable you to conduct business transactions with your trading partners on all major VANs, as well as with users of other Internet-based EDI services.

With ACCPAC Exchange your documents are sent via the Internet through ACCPAC Online to IBM® Application Hosting – Business Exchange Services, where they are routed to the proper trading partner. ACCPAC Exchange facilitates secure bi-directional electronic data interchange between trading partners using structured document formats including XML and EDI files (ANSI and EDIFACT standards). Business documents can be sent or received from legacy or Internet-enabled applications and processed in batch or real-time modes.

Through the use of highly secure encryption technologies, ACCPAC Exchange protects both inbound and outbound EDI documents as they travel between you and your trading partner. ACCPAC Exchange manages the flow of information while providing 'non-repudiation' services – validating the origin of the documents you count on to run your business.
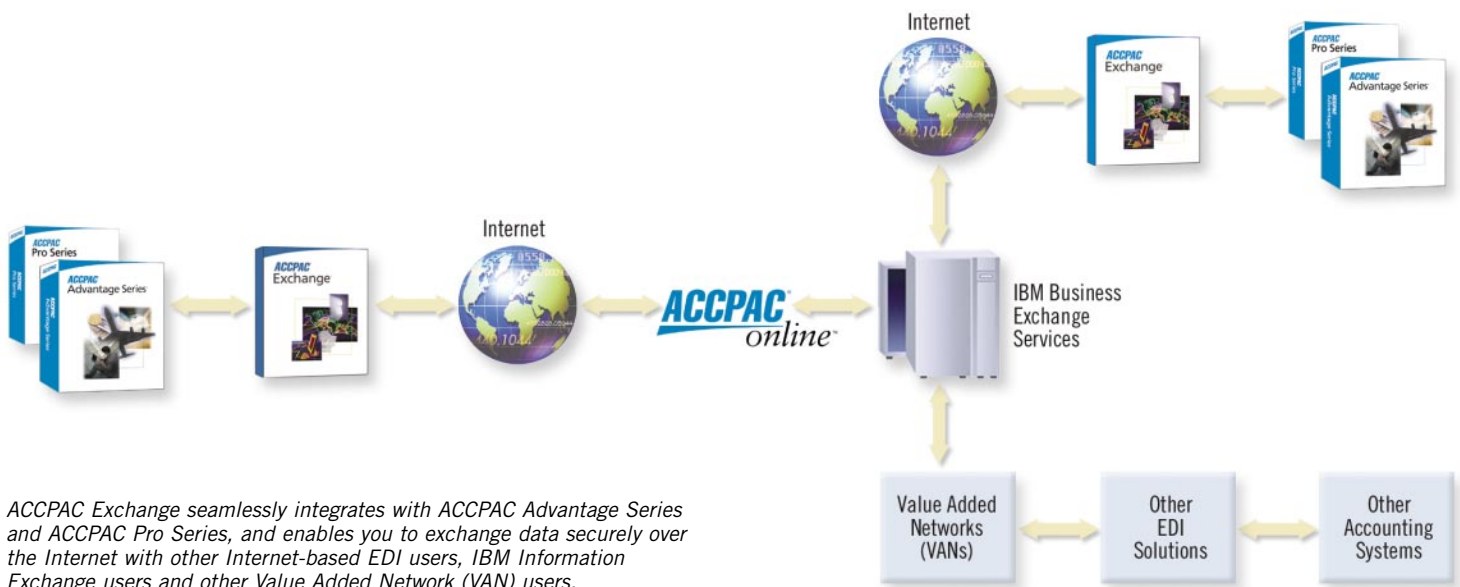

With ACCPAC Exchange, you choose from a full suite of complementary EDI software so you have the solutions you need to meet business regulations and conduct EDI business over the Internet today.

ACCPAC Exchange Transaction Manager™ – The engine that provides bi-directional translation and integration with ACCPAC Advantage Series or ACCPAC Pro Series.

ACCPAC Exchange Maps™ – Trading partner specific documents with guaranteed compatibility to their EDI document standards.

ACCPAC Exchange ASN™ – Software that meets the container-level requirements set by many trading partners who mandate an Advanced Ship Notice (or 856) document to be sent before receipt of goods.

For more information about ACCPAC Exchange call 800-945-8007, visit www.accpac.com/accpacexchange or send us an e-mail at accpacexchange@accpac.com.

ACCPAC Exchange seamlessly integrates with ACCPAC Advantage Series and ACCPAC Pro Series, and enables you to exchange data securely over the Internet with other Internet-based EDI users, IBM Information Exchange users and other Value Added Network (VAN) users.
